Donnie and Sandy Shadrow SOS Metals

How ROM helped Make Us Millions

When we started with ROM, we had two facilities. By the time we sold the business in 2013, we had 9 facilities across the globe, all using ROM. The system made management easy and with ROM's inventory control, we always knew what we had in the pipeline or ready for sale.

ROM was our secret weapon

ROM was our secret weapon. When we would show companies like Rolls Royce, GE, Boeing, etc., ROM's "Chain of Custody" system, it was like taking candy from a baby. They had never seen such detailed traceability. Confidence is key when dealing with vacuum quality materials.

One of the things that always impressed us was 21st Century's ability to adapt and change. As our business changed over the years, the system easily adapted and grew with us. The knowledge and experience they bring to the table, having worked with so many different kinds of recycling businesses, added value in ways we never expected."

SOS Metals *specialized in High Temperature alloys and commercial account management. They purchased ROM in 2001 and used it for everything from Dispatch and Bin tracking to inventory and sales. In 2013, the business was sold to PCC and today the Shadrows are enjoying the good life. If you ask, they will credit ROM as a big factor to their success.*

ROM Features SOS Took Advantage of...

Inventory Control
- WIP
- Finished Goods
- Production Control
- Outside Processing
- Accumulation Bins
- Cost of Goods Sold

Enterprise Level Systems
- A/P and A/R
- Consolidated Reporting
- Distributed Sales Orders

Dispatch and Bin Tracking

Specialty Alloy Systems
- Chain of Custody
- Elemental Level Tracking
